

**Important Information**

- Investment in the ICBC Credit Suisse RMB Cash Fund (the "Sub-Fund") is subject to normal market fluctuations and other risks inherent in the Sub-Fund's assets. Accordingly, there is a risk that you may not recoup the original amount invested in the Sub-Fund or may lose a substantial part or all of your investment.
- The purchase of the Sub-Fund's units is not the same as placing funds on deposit with a bank or deposit-taking company. There is no guarantee of the repayment of principal and the Manager has no obligation to redeem the investment at the offer value. The Sub-Fund is not subject to the supervision of the Hong Kong Monetary Authority. The Sub-Fund does not have a constant Net Asset Value.
- The Sub-Fund is dominated in RMB and invests primarily in RMB denominated and settled short term debt instruments issued within the PRC through the QFI Status quota of the Manager, direct investments in the mainland China interbank bond markets ("CIBM") and/or other means permitted by applicable law. Therefore it is subject to i) RMB currency risk; ii) risks pertaining to short term debt instruments; iii) risk relating to investing in a single market/the China market; iv) PRC tax risk; v) risk relating to QFI; vi) risk relating to the CIBM; and vii) counterparty and settlement risk.
- The Net Asset Value of the Sub-Fund is calculated using the amortised cost method. The accuracy of the amortised cost method of valuation can be lowered by changes in market interest rates and the credit standing of issuer of the Sub-Fund's investments. It may result in periods during which the value of the security, as determined by the amortised cost method of valuation, is higher or lower than the price the Sub-Fund would receive if the security was sold. Where the value of a security as determined by the amortised cost method of valuation is higher than the market price of such security and an investor redeems at a redemption price calculated on the basis of such amortised cost value, the Sub-Fund may be left with a portfolio of assets whose value is much lower than the market price of the relevant securities. The remaining unitholders may therefore be worse off.
- Investors should note that payment of dividends out of capital or effectively out of capital represents a return or withdrawal of part of the amount originally invested or from any capital gains attributable to the original investment. Any such distributions may result in an immediate reduction of the Net Asset Value per unit of the Sub-Fund.
- Investors should not invest in the Sub-Fund unless the intermediary who sells it to you has explained to you that the Sub-Fund is suitable for you having regard to your financial situation, investment experience and objectives.
- Investors should not invest in the Sub-Fund solely based on the information provided in this document and should read to the Explanatory Memorandum and the Key Facts Statement of the Sub-Fund carefully for details, including risk factors.

Strategies and Investment Objective

The investment objective of the Sub-Fund is to provide investors with daily liquidity together with a higher investment return comparable to normal RMB denominated money market interest rates. The Sub-Fund seeks to achieve its investment objective by investing in RMB denominated and settled short term debt instruments, and RMB denominated cash and cash equivalents. The Sub-Fund may invest up to 100% of its Net Asset Value in RMB denominated and settled short term debt instruments issued or distributed within mainland China by Chinese government (including state, provincial and local governments), quasi-government organizations (including policy banks), banks, financial institutions and other corporation which are traded on the China Interbank Bond Market and/or the exchange traded bond markets in mainland China, through the QFI Status of the Manager, direct investments in the China Interbank Bond Market and/or other means as may be permitted by the applicable laws and regulations from time to time. The Sub-Fund may also invest up to 60% of its Net Asset Value in RMB denominated and settled short term debt instruments and/or RMB denominated cash and cash equivalents issued outside mainland China. In respect of instruments issued and distributed within mainland China, the Sub-Fund will only invest in those short term debt instruments issued and distributed within mainland China, provided that either the instruments themselves or the issuers of such instruments carry a short term credit rating of A-1 or above or long term rating of AAA or above as rated by a PRC local credit rating agency. For those instruments issued and distributed outside mainland China that the Sub-Fund may invest in, the instruments themselves or the issuers of such instruments should carry a short term credit rating of A-2 or above (or its equivalent), or long term credit rating of BBB or above (or its equivalent) as rated by an international credit rating agency. The Sub-Fund will maintain a portfolio with weighted average maturity not exceeding 60 days and a weighted average life not exceeding 120 days.
